This is an additional report. For previous results, evidence received, and disposition, see Case Report ID CRT-0715-0593.

RESULTS AND CONCLUSIONS

STR DNA typing using the AmpF/STR® Identifier® PCR Amplification Kit was previously performed on the DNA sample from Titus McBride. A DNA profile was determined.

This DNA profile was compared to the results in the following case:

FB Number	Complaint Number	Entity Name	Case Report ID

Titus McBride is excluded as a contributor to all samples where comparisons could be made.

Conclusions for DNA Typing

Mixture: A DNA profile that has more than one donor.

Major: Alleles that are present in a higher proportion in a DNA mixture profile.

Minor: Alleles that are present in a lower proportion in a DNA mixture profile.

Match: The alleles detected in a questioned/evidence sample that are the same as the alleles detected in another sample.

Is included as a possible contributor: For the locations where comparisons could be made, all or most of the DNA alleles seen in an individual's DNA profile were also seen in the mixture. The allele(s) that were absent could be explained by any of several factors. Therefore, this person cannot be ruled out as a possible contributor to the mixture.

Excluded as a contributor to the mixture: For the locations where comparisons could be made, one or more of the DNA alleles seen in an individual's DNA profile were not seen in the mixture and this absence cannot be explained. Therefore, this person can be ruled out as a contributor.

No conclusions can be drawn: The results do not support a positive association or an exclusion. Therefore, it cannot be determined whether a person can be included as a possible contributor to the mixture.

Not suitable for comparison: The DNA results on the evidence are either too incomplete or too complex to be the basis for conclusions regarding the source of the DNA.

Partial Match: An association between two single-source (clean or fully deconvoluted) profiles, showing similarities but short of an exact match, that suggests that the source of a profile is potentially a relative of the source of the other, partially matching, profile. Partial matches are inadvertent, and may be found at the local, state, or national levels (through comparison at the bench, LINKAGE, or CODIS searches).
